

Table Service Restaurant **3700 TSR**

Flexible

Reliable

Versatile

res3000

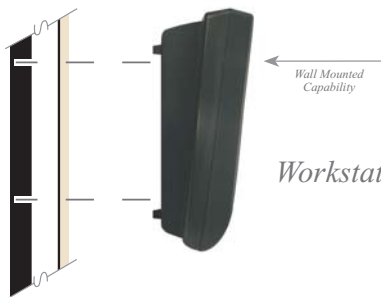

Created for the Full Service Restaurant

Your Guests Will Like It.

Our exclusive Restaurant View screen puts a graphical layout of your restaurant literally at your fingertips, giving your staff the information they need to focus on your customers. With your entire restaurant on the screen and different colors to show the status of each table, you and your servers instantly see which guests need attention. Allowing you to increase customer service and maximize table turns. The MICROS Kitchen Display System (KDS) gives you real-time information to manage and control customer service like never before. Mounted conveniently in your kitchen or food prep area, this intuitive graphical application displays food orders for preparation and monitors the timing of orders for your "Speed of Service." Our system puts you just a touch away from all the information you and your servers need to be effective and productive.

Your Staff Will Like It.

MICROS's superior touchscreen technology provides your staff with a new level of flexibility. It's easy-to-learn and easy-to-use. You can customize screen layouts to optimize functionality for every area of your restaurant. Your server screens can have more check information, your bar screens more space for beverage input, while manager screens can provide a complete overview of front-of-the-house activity and management functions. MICROS can provide training that will not only save your people time, but give them the freedom to focus on your guests.

React Faster with Better Data.

Your restaurant is unique. The MICROS 3700 Table Service Restaurant (TSR) will not change that or the way you run your business. What it does do is provide the information you need to manage your business smarter and improve your bottom line. Its integrated database puts a wealth of information at your fingertips for reporting and analysis. Data is available at the restaurant-level or can be rolled-up to the regional and corporate levels through Enterprise Management.

Flexible, in Your Restaurant and Across the Globe.

From table service and counter service to bar and cafeteria service, the MICROS 3700 TSR is the only POS system you need. It is scalable enough to support one or all of these operations. A flexible, configurable open application, it adjusts to your operation's processes and needs. Plus, you can put the MICROS 3700 TSR to work anywhere in the world. Multi-language support and multi-currency options, including the EURO, make the MICROS 3700 TSR an international-friendly system. And its country-specific tax features support taxing schemes for all U.S. municipalities and most countries around the world.

Eclipse PC Workstation

Cash Accountability Through an Integrated Cash Management Module.

Cash management (CM) is designed to help managers monitor and track the flow of cash or other tender media to and from the tills, safes, and deposits throughout the restaurant. This insures cash accountability among employees and managers within your establishment.

The Server banking functionality is used to define and track cash transactions handled by a server in a table service restaurant environment. When a server signs in, the system assigns to him/her a virtual till against which transactions may be posted. Only one server can be assigned to a server bank. CM can specify a starting amount, assigns a count sheet, and establishes a cash pull threshold. Managers can audit the server bank contents throughout the day, and transfer cash, as necessary.

When the server's shift ends, CM is used to close, count, and balance the server bank using automated count sheets. An Over/Under Report can be generated based on a comparison of the actual POS transactions versus the server's physical count of collected tenders.

Eclipse PC Workstation

Open Architecture That Grows With Your Needs.

The MICROS 3700 TSR is a true 32-bit application designed to run under the Microsoft® Windows® platform. It provides high performance and flexibility that is proven for the new millennium. Our open software easily integrates with OPOS-compliant peripheral hardware including printers, cash drawers, and pole displays. And our MICROS 3700 TSR architecture is designed to allow you to add workstations, new stores and applications easily so the system grows with your operation.

At the heart of the MICROS 3700 TSR is a maintenance free, relational database from Sybase®, a leading provider of embedded database solutions. Sybase® is a robust relational database proven successful in high-volume, transaction-oriented environments. It is a powerful database solution that provides excellent data access with minimum system administration. So your people can focus on running their restaurant, not their databases.

Intelligent, Simple to Use, Reliable and Affordable: the Way POS Terminals Should Be.

The open technology of our MICROS 3700 POS can work on any Microsoft® Windows®-based PC. However, many restaurants prefer our industry specific hardware. MICROS offers several hardware options including the Eclipse PC Workstation, the Workstation 4 (WS4) and a wireless handheld terminal called Mobile MICROS. All MICROS hardware is ruggedized and spill-resistant for the challenging restaurant environment.

The Eclipse PC Workstation boasts one of the smallest footprints in the industry, perfect for those locations where space is at a premium. The Eclipse gives you more connectivity options and superior cable management making this unit aesthetically pleasing.

MICROS Workstation 4 (WS4) is a revolutionary advancement that will change the way hospitality operators think about Windows®-based POS

systems. The unique features allow the WS4 to lower the total cost of ownership for restaurant operators while providing them a fully functional, highly reliable POS appliance at a fraction of the cost. The WS4's solid-state design requires no fan or hard drive. The WS4's "depot" capability makes installation as easy as plugging in a telephone, so you enjoy big savings by reducing or eliminating service calls and downtime. The WS4 offers a personality module to make replacement fast and simple. This module stores all of that workstation's configuration and identity on one card, making replacement as easy as popping the personality module out of the failed unit, inserting it into the new unit and plugging in. The new unit immediately takes over and resumes operations. No programming required, no loading of software, a perfect solution for depot maintenance programs.

Mobile MICROS allows you to take your POS wireless, offering excellent, immediate service to your customers. Mobile MICROS uses the Symbol handheld terminal from Symbol Technologies, whose hardware is built to last. This palm-size device was engineered to withstand a four-foot drop to concrete.

Part of Your Total Competitive Edge.

The MICROS 3700 is part of the Restaurant Enterprise Series 3000 (RES 3000), our complete suite of integrated restaurant-level and enterprise-level applications. RES 3000 is the total answer to maximizing your operation's productivity and profitability. Meeting your back office needs, the Enterprise Office component of RES 3000 includes a Secure Desktop, Product Management, Labor Management, Financial Management, and Forecast Management software. Our Restaurant Operations capabilities within RES 3000 feature the MICROS Kitchen Display System and Transaction Analyzer. For Corporate Applications, RES 3000 offers Enterprise Management for corporate database administration and mymicros.net for in-depth reporting and analysis.

The RES 3000 suite on mymicros.net, let you see instantly how your business is performing. With real-time transaction posting from the POS system, up-to-the-minute information is always available. Access data any time, not just at the end of the day. Data is stored on a daily basis allowing you to track month-to-month and year-to-year business trends. So, you can easily generate reports and forecasts based on your historical data.

The RES 3000 suite allows you to generate reports that fit your precise needs. It gives you the freedom to customize reports to your operation, or choose from over 250 standard report templates. Custom reports can be generated using Seagate Crystal Reports™, Microsoft® Excel®, the report writer of your choice, or any ODBC compliant tool. Use MICROS's Transaction Analyzer or Export Utility to identify trouble spots with ad hoc and exception reporting, or try our Financial Management software, an easily configurable and flexible reporting tool at the store level for managers.

At the enterprise level, mymicros.net offers a complete data warehouse solution with dynamic drill down capabilities. mymicros.net takes this mass amount of data and turns it into simple business relevant views, available in near real-time with access from anywhere, with Internet access, at any time.

Mobile MICROS

MICROS is leveraging its unique position as both a software developer and a hardware manufacturer to provide an unprecedented value proposition.

Whether you are an independent restaurant or an international chain, full service, counter service, or a combination, the MICROS 3700 TSR Point-of-Sale (POS) System is the one system that can adapt to your way of doing business. A comprehensive POS system that is both powerful and flexible, the MICROS 3700 TSR can help your operation be more efficient and profitable, because it's faster, easier and smarter than any other system available today. As part of the Restaurant Enterprise Series, our complete suite of integrated restaurant applications, the MICROS 3700 TSR gives you instant access to the information you need to be successful. Today and tomorrow.
